

- Squeeze filtrate out of high- solids pulp
- Standardize sample preparation for pulp testing
- Stabilize hot stock samples by removing excess chemicals
- Convenient sample size “cakes” for storage, shipping and handling

The Pulmac Dewatering Device is a tool designed to allow the controlled dewatering of an unknown (3-15% concentration) pulp sample to a consistent solids content in just five minutes. Weighing out pulp from this dewatered sample accurately “predicts” an oven dried equivalent pulp sample for a variety of test purposes.

Electrical:

- 220V or 120V

Dimensions:

- Height: 41cm
- Width: 18cm
- Length: 13.5cm
- Weight: 44kg
