INTRODUCTION

This instrument is used for determining the thickness loss of textile floor coverings under dynamic load. The specimen is subjected to a cyclic-loading treatment in which an impact assembly, with two feet on its underside, repeatedly drops freely onto the specimen. At the same time the specimen is slowly traversed. The thickness of the specimen is measured before and after the procedure.

APPLICATIONS

- All types of textile floor covering with a surface that is level in height and construction. It is not applicable to other floor coverings unless the areas of different thicknesses or construction can be tested separately.

STANDARDS

- AS/NZS 2111.2
