

PT8101

Heavy Industrial • Voltage Divider

Absolute Linear Position to 60 inches (1524 mm)
 Aluminum or Stainless Steel Enclosure Options
 VLS Option To Prevent Free-Release Damage
 IP68 • NEMA 6 Protection

GENERAL

Full Stroke Range Options	0-2 to 0-60 inches
Output Signal Options	voltage divider (potentiometer)
Accuracy	see ordering information
Repeatability	± 0.02% full stroke
Resolution	essentially infinite
Measuring Cable Options	stainless steel or thermoplastic
Enclosure Material	powder-painted aluminum or stainless steel
Sensor	plastic-hybrid precision potentiometer
Potentiometer Cycle Life	see ordering information
Maximum Retraction Acceleration	see ordering information
Weight, Aluminum (Stainless Steel) Enclosure	3 lbs. (6 lbs.) max.

ELECTRICAL

Input Resistance Options	see ordering information
Power Rating, Watts	see ordering information
Recommended Maximum Input Voltage	see ordering information
Output Signal Change Over Full Stroke Range	94% ±4% of input voltage

ENVIRONMENTAL

Enclosure	NEMA 4/4X/6, IP 67/68
Operating Temperature	-40° to 200°F (-40° to 90°C)
Vibration	up to 10g to 2000 Hz maximum

The PT8101, using a high cycle plastic-hybrid potentiometer, operates with any basic panel meter or programmable controller in factories and harsh environments requiring linear position measurements in ranges up to 60".

As a member of Celesco's innovative family of NEMA 4 rated cable-extension transducers, the PT8101: installs in minutes by mounting its body to a fixed surface and attaching its cable to the movable object, works without perfect parallel alignment, and when its stainless-steel cable is retracted, it measures only 5".

Output Signal:

-- bridge circuit option available, see ordering information

Cable Guide Options:

VLS Option - Free Release Protection

The patented Celesco Velocity Limiting System (VLS) is an option for PT8000 Series cable extension transducers that limits cable retraction to a safe 40 to 55 inches per second.

The VLS option prevents the measuring cable from ever reaching a damaging velocity during an accidental free release. This option is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable mishandling or attachment failure.

VLS is NOT available for medium and high cable tension options or 2, 5 and 15-inch stroke ranges.

How To Configure Model Number for VLS Option:

creating VLS model number (example):

1. select PT8101 model **PT8101-0060-111-1110**
2. remove "PT" from the model number ~~PT~~ **8101-0060-111-1110**
3. add "VLS" **VLS + 8101-0060-111-1110**
4. completed model number ! **VLS8101-0060-111-1110**

**Note: please contact factory for a solution to options not supported.

The PT8420 with its 4-20 mA feedback signal, is ideal for monitoring the stroke of a hydraulic cylinder and other applications requiring position data acquisition in harsh environments.

As a member of our family of NEMA 4-rated cable-extension transducers, the PT8420 provides a feedback signal that is proportional to the linear movement of a traveling stainless-steel extension cable. Simply mount the body of the transducer to a fixed surface and attach the extension cable to the moving object.

Output Signal:

*Optional 3-wire, 0...20mA output signal available.

*-Test pressure: 100 feet [30 meters] H₂O (40 PSID) Test Medium: Air; Duration: 2 hours. **-applies to stainless steel enclosure only. ***14-32 VDC for hazardous area option.

Cable Guide Options:

Output Signal Selection:

The output signal direction can be reversed at any time by simply changing the dip-switch settings found on the internal signal board. After the settings have been changed, adjustment of the Zero and Span trimpots will be required to precisely match signal values to the beginning and end points of the stroke.

VLS Option - Free Release Protection

The patented Celesco Velocity Limiting System (VLS) is an option for PT8000 Series cable extension transducers that limits cable retraction to a safe 40 to 55 inches per second.

The VLS option prevents the measuring cable from ever reaching a damaging velocity during an accidental free release. This option is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable mishandling or attachment failure.

VLS is NOT available for medium and high cable tension options or 2, 5 and 15-inch stroke ranges.

How To Configure Model Number for VLS Option:

creating VLS model number (example):

- select PT8420 model **PT8420-0060-111-1110**
- remove "PT" from the model number ~~PT~~ **8420-0060-111-1110**
- add "VLS" **VLS + 8420-0060-111-1110**
- completed model number! **VLS8420-0060-111-1110**

**Note: please contact factory for a solution to options not supported.

Operating Temperature	-40° to 200°F (-40° to 90°C)
Vibration	up to 10 G's to 2000 Hz maximum

The PT8510 can operate from an unregulated 14.5 to 40 VDC power supply while providing an output signal that is proportional to the linear movement of its measuring cable. The PT8510 has a maximum measurement range up to 60" and has 4 output signal options to choose from: 0...10, 0...5, -10...+10 and -5...+5 Vdc.

As a member of Celesco's innovative family of NEMA-4 rated cable-extension transducers, the PT8510 offers numerous benefits. It installs in minutes, fits into areas unsuited for rod-type measurement devices, and works without perfectly parallel alignment.

Output Signal Selection (does not apply to -5...+5 & -10...+10 vdc options)

The output signal direction can be reversed at any time by simply changing the dip-switch settings found on the internal signal board. After the settings have been changed, adjustment of the Zero and Span trimpots will be required to precisely match signal values to the beginning and end points of the stroke.

To gain access to the signal board, remove four Allen-Head Screws and remove rear cover.

VLS Option - Free Release Protection

The patented Celesco Velocity Limiting System (VLS) is an option for PT8000 Series cable extension transducers that limits cable retraction to a safe 40 to 55 inches per second.

The VLS option prevents the measuring cable from ever reaching a damaging velocity during an accidental free release. This option is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable mishandling or attachment failure.

VLS is NOT available for medium and high cable tension options or 2, 5 and 15-inch stroke ranges.

How To Configure Model Number for VLS Option:

creating VLS model number (example):

- select PT8420 model **PT8510-0060-111-1110**
- remove "PT" from the model number ~~PT~~ **8510-0060-111-1110**
- add "VLS" **VLS + 8510-0060-111-1110**
- completed model number ! **VLS8510-0060-111-1110**

version: 7.0 last updated: November 5, 2012

PT8150

Heavy Industrial • Incremental Encoder

Linear Position to 60 inches • 1250mm (metric range)
 Aluminum or Stainless Steel Enclosure Options
 VLS Option To Prevent Free-Release Damage
 IP67 • NEMA 6 Protection

GENERAL

Full Stroke Range Options	0-30, 0-60 inches, 0-625, 0-1250 mm
Output Signal	incremental encoder (quadrature)
Accuracy	0.04% full stroke (contact factory for higher accuracy)
Repeatability	± 0.02% full stroke
Resolution Options	20 to 500 pulses per inch
Measuring Cable Options	stainless steel or thermoplastic
Enclosure Material	powder-painted aluminum or stainless steel
Sensor	optical encoder
Maximum Retraction Acceleration	see ordering information
Weight, Aluminum (Stainless Steel) Enclosure	3 lbs. (6 lbs.) max.

ELECTRICAL

Input Voltage	see ordering information
Input Current	see ordering information
Output Driver Options	see ordering information

ENVIRONMENTAL

Enclosure	NEMA 4/4X/6, IP 67
Operating Temperature	0° to 160°F (-17° to 71°C)
Vibration	up to 10g to 2000 Hz maximum

With its incremental optical encoder and industrial design, this rugged transducer provides the highest accuracy and longest life of any measurement device of its kind. For measurements up to 60 inches, this model is available in a variety of resolutions and output stages to fit virtually any requirement.

The PT8150 offers numerous advantages over other industrial-grade sensors: It installs in minutes by mounting its body to a fixed surface and attaching its cable to the movable object, fits into areas unsuited for rod-type measurement devices, and works without perfect parallel alignment.

Output Signal Options:

Cable Guide Options:

*important! – bellows limits measuring cable travel to 25 inches, contact factory before ordering.

VLS Option - Free Release Protection

The patented Celesco Velocity Limiting System (VLS) is an option for PT8000 Series cable extension transducers that limits cable retraction to a safe 40 to 55 inches per second.

The VLS option prevents the measuring cable from ever reaching a damaging velocity during an accidental free release. This option is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable mishandling or attachment failure.

VLS is NOT available for medium and high cable tension options or 2, 5 and 15-inch stroke ranges.

How To Configure Model Number for VLS Option:

creating VLS model number (example):

1. select PT8150 model **PT8150-0060-111-1110**
2. remove "PT" from the model number ~~PT~~ **8150-0060-111-1110**
3. add "VLS" **VLS + 8150-0060-111-1110**
4. completed model number ! **VLS8150-0060-111-1110**

**Note: please contact factory for a solution to options not supported.

Update Rate	32 msec

ENVIRONMENTAL

Environmental Suitability	NEMA 4X/6, IP 67
Operating Temperature	-40° to 200°F (-40° to 90°C)
Vibration	up to 10 g's to 2000 Hz maximum

The PT8232 delivers position feedback via RS232 serial communication to your data acquisition or controller system. The PT8232 sends a raw 16-bit count from 0000H to FFFFH. Additionally this device can be set to continuously send data or send data only when polled.

As the internal position sensing element is a precision potentiometer, this transducer maintains current accurate position even during power loss and does not need to be reset to a "home" position.

Output Signal:

I/O Format:

Data Frame

6 byte Hex string:

*-see below

Important! All communications to/from the transducer are in **HEX!**

User Commands:

Description	User Command				Sensor Response			
	<CMD>	<B ₀ >	<B ₁ >	<B ₂ >	<CMD>	<B ₀ >	<B ₁ >	<B ₂ >
Get Sensor Info	0x05	0x00	0x00	0x00	0x05	version ⁽⁴⁾	date ⁽⁵⁾	date ⁽⁵⁾
Get Serial Number	0x15	0x00	0x00	0x00	0x15	serial number ⁽³⁾		
Start Continuous Data	0x25	0x00	0x00	0x00	0x25	0x00	0x00	0x00
Stop Continuous Data	0x35	0x00	0x00	0x00	0x35	0x00	0x00	0x00
Get Position Data	0x45	0x00	0x00	0x00	0x45	CMC ⁽¹⁾	CMC ⁽¹⁾	status ⁽²⁾

(1) CMC - Current Measurement Count (Position)

The **Current Measurement Count (CMC)** is the output data that indicates the present position of the measuring cable.

The CMC is a 16-bit value that occupies the first two bytes (B₀ and B₁) of the data field. B₀ is the MSB (most significant byte) and B₁ is the LSB (least significant byte).

The CMC starts at 0000H with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at FFFFH. This holds true for all ranges.

(2) Status

The status byte is used as a flag to indicate the validity of the position signal that the internal electronics receives from the potentiometer.

Flags are as follows:
0x00 = GREEN, 0x55 = YELLOW, 0xAA = RED

A "green" flag shows everything OK. A "yellow" or "red" flag indicates that the sensor has either been extended beyond its range or that there is a problem with the potentiometer.

(3) Serial Number

Each sensor has its own unique serial number. This information can be retrieved by sending the sensor the "Get Serial Number" command.

The serial number is a 3 byte value from which ranges from 0 to 9999999 (decimal).

(4) Version

This is a single byte value (0-255 decimal) which indicates the currently installed firmware version of the sensor.

(5) Date

This is a 2 byte value showing the date of currently installed firmware. This value ranges from 01011 - 12319 (decimal). Format is MMDDYY. While the month and day are expressed as two digit numbers the year is expressed in a single digit only.

Example: 08054 = August 5, 2004

Baud Rate

The baud rate can be set using switches 7 & 8 on the 8-pole DIP switch found on the rs232 controller board located inside the transducer.

DIP-7	DIP-8	baud rate
0	0	9600
1	0	19200
0	1	38400
1	1	9600

RS232 Controller Board and DIP Switch Location

to gain access to the controller board, remove four Allen-Head Screws and remove rear cover.

Cable-Extension Position Transducer

CANbus • SAE J1939

Ranges: 0-2 to 0-60 inches

Industrial Grade

PT8CN

Specification Summary:

GENERAL

Full Stroke Ranges..... 0-2 to 0-60 inches
 Electrical Interface..... CANbus SAE J1939
 Protocol..... Proprietary B
 Accuracy..... ± 0.25% to ± 0.10% full stroke
 Repeatability..... ± 0.02% full stroke
 Resolution..... ± 0.003% full stroke
 Measuring Cable..... stainless steel, nylon-coated or thermoplastic
 Enclosure Material..... powder-painted aluminum or stainless steel
 Sensor..... plastic-hybrid precision potentiometer
 Potentiometer Cycle Life..... *see ordering information*
 Maximum Retraction Acceleration..... *see ordering information*
 Weight, Aluminum (Stainless Steel) Enclosure..... 3 lbs. (6 lbs.), max.

ELECTRICAL

Input Voltage..... 7 - 18 VDC
 Input Current..... 60 mA max.
 Baud Rate..... 125K, 250K, or 500K via DIP switches
 Update Rate..... 10 ms. (20 ms. available—*contact factory*)

ENVIRONMENTAL

Environmental Suitability..... NEMA 4X/6, IP 67
 Operating Temperature..... -40° to 185°F (-40° to 85°C)
 Vibration..... up to 10 G's to 2000 Hz maximum

The PT8CN, using a high cycle plastic-hybrid potentiometer, communicates to your PLC via the CANbus SAE J1939 interface. Suitable for factory and harsh environment applications requiring linear position feedback in ranges up to 60".

As a member of Celesco's innovative family of NEMA 4 rated cable-extension transducers, the PT8CN installs in minutes by simply mounting its body to a fixed surface and attaching its cable to the movable object. Perfect parallel alignment not required.

*Sensor field data can be factory set to customer specific value. **Customer defined, set via Dips 1-6. Bit values shown for example only, see Address Setting below.

Setting the Address (Node ID) and Baud Rate

Address Setting (Node ID)

The Address Setting (Node ID) is set via 6 switches located on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

The DIP switch settings are binary starting with switch number 1 (= 2⁰) and ending with switch number 6 (= 2⁵).

Baud Rate

The transmission baud rate may be either factory preset at the time of order or set manually at the time of installation.

The baud rate can be set using switches 7 & 8 on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

DIP-1 (2 ⁰)	DIP-2 (2 ¹)	DIP-3 (2 ²)	DIP-4 (2 ³)	DIP-5 (2 ⁴)	DIP-6 (2 ⁵)	address (decimal)
0	0	0	0	0	0	0
1	0	0	0	0	0	1
0	1	0	0	0	0	2
...
1	1	1	1	1	1	63

DIP-7	DIP-8	baud rate
0	0	125k
1	0	250k
0	1	500k
1	1	125k

Current % of Measurement Range

The Current % of Measurement Range is a 2-byte value that expresses the current linear position as a percentage of the entire full stroke range. Resolution is .1 % of the full stroke measurement range.

This value starts at 0x0000 at the beginning of the stroke and ends at 0x03E8.

Example:	Hex	Decimal	Percent
	0000	0000	0.0%
	0001	0001	0.1%
	0002	0002	0.2%

	03E8	1000	100.0%

Current Measurement Count

The Current Measurement Count (CMC) is the output data that indicates the present position of the measuring cable.

The CMC is a 16-bit value that occupies bytes B₀ and B₁ of the data field. B₀ is the LSB (least significant byte) and B₁ is the MSB (most significant byte).

The CMC starts at 0x0000 with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at 0xFFFF. This holds true for all ranges.

Error Flags

0x55 (yellow LED on controller board) indicates that the sensor has begun to travel beyond the calibrated range of the internal position potentiometer.

0xAA (red LED on controller board) indicates that the sensor has moved well beyond the calibrated range of the internal position potentiometer.

If either error flag occurs within the full stroke range of the sensor, the unit should be returned to the factory for repair and recalibration.

Converting CMC to Inches

If required, the CMC can easily be converted a linear measurement expressed in inches instead of just counts.

This is accomplished by first dividing the CMC by 65,535 (total counts over the range) and then multiplying that value by the FSR:

$$\left(\frac{\text{CMC}}{65,535} \right) \times \text{FSR}$$

Example:

If the full stroke range is 30 inches and the current position is 0x0FF2 (4082 Decimal) then,

$$\left(\frac{4082}{65,535} \right) \times 30.00 \text{ inches} = 1.87 \text{ inches}$$

CANBus Controller Board and DIP Switch Location

to gain access to the controller board, remove four Allen-Head Screws and remove rear cover.

Cable-Extension Position Transducer

DeviceNET®

Ranges: 0-2 to 0-60 inches

Industrial Grade

PT8DN

Specification Summary:

GENERAL

Full Stroke Ranges..... 0-2 to 0-60 inches
 Electrical Interface..... CANbus ISO 11898
 Protocol..... DeviceNET version 2.0
 Accuracy..... ± 0.25% to ± 0.10% full stroke
 Repeatability..... ± 0.02% full stroke
 Resolution..... ± 0.003% full stroke
 Measuring Cable..... stainless steel, nylon-coated or thermoplastic
 Enclosure Material..... powder-painted aluminum or stainless steel
 Sensor..... plastic-hybrid precision potentiometer
 Potentiometer Cycle Life..... see ordering information
 Maximum Retraction Acceleration..... see ordering information
 Weight, Aluminum (Stainless Steel) Enclosure..... 3 lbs. (6 lbs.), max.

ELECTRICAL

Input Voltage..... bus powered
 Input Current..... 40 mA
 Address Setting/Node ID..... 0...63 set via DIP switches—*default setting: 63*
 Baud Rate..... 125K, 250K or 500K set via DIP switches
 EDS File..... available @ <http://www.celesco.com/download>

ENVIRONMENTAL

Environmental Suitability..... NEMA 4X/6, IP 67
 Operating Temperature..... -40° to 185°F (-40° to 85°C)
 Vibration..... up to 10 G's to 2000 Hz maximum

The PT8DN, using a high cycle plastic-hybrid potentiometer, communicates via DeviceNET protocol with programmable controllers in factories and harsh environments requiring linear position measurements in ranges up to 60”.

As a member of Celesco’s innovative family of NEMA 4 rated cable-extension transducers, the PT8DN installs in minutes by simply mounting it’s body to a fixed surface and attaching it’s cable to the movable object. Perfect parallel alignment not required.

Outline Drawing

I/O Format

***Current Measurement Count**

The **Current Measurement Count (CMC)** is the output data that indicates the present position of the measuring cable.

The CMC is a 16-bit value that occupies the first two bytes (B₀ and B₁) of the data field. B₀ is the LSB (least significant byte) and B₁ is the MSB (most significant byte).

The CMC starts at 0000H with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at FFFFH. This holds true for all ranges.

****Full Stroke Range**

The **Full Stroke Range (FSR)** is a 16-bit value in the data field that expresses the full range of the sensor in inches. This value can be used to convert the actual count to units of measurement should the application require it.

The full stroke measurement range occupies the second two bytes (B₂ and B₃) of the data field.

B₂ is the LSB (least significant byte) and B₃ is the MSB (most significant byte).

This value is expressed in inches.

Example:

Hex Value	Decimal Equivalent	Full Stroke Range
001E	30	30 inches

Converting CMC to Inches

If required, the CMC can easily be converted to a linear measurement expressed in inches instead of just counts.

This is accomplished by first dividing the CMC by 65,535 (total counts over the range) and then multiplying that value by the FSR:

$$\left(\frac{\text{CMC}}{65,535} \right) \times \text{FSR}$$

Example:

If the full stroke range is **30 inches** and the current position is **OFF2 Hex** (4082 Decimal) then,

$$\left(\frac{4082}{65,535} \right) \times 30.00 \text{ inches} = 1.87 \text{ inches}$$

Address Setting (Node ID), Baud Rate and Bus Termination Settings

Address Setting (Node ID)

The Address Setting (Node ID) is set via 6 switches located on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

The DIP switch settings are binary starting with switch number 1 (= 2⁰) and ending with switch number 6 (= 2⁵).

DIP-1 (2 ⁰)	DIP-2 (2 ¹)	DIP-3 (2 ²)	DIP-4 (2 ³)	DIP-5 (2 ⁴)	DIP-6 (2 ⁵)	address (decimal)
0	0	0	0	0	0	0
1	0	0	0	0	0	1
0	1	0	0	0	0	2
...
1	1	1	1	1	1	63

Baud Rate

The transmission baud rate may be either factory preset at the time of order or set manually at the time of installation.

The baud rate can be set using switches 7 & 8 on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

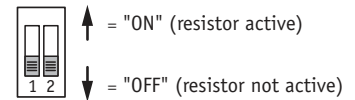

DIP-7	DIP-8	baud rate
0	0	125k
1	0	250k
0	1	500k
1	1	125k

Bus Termination

The setting of the internal bus termination resistor may be specified upon order or manually changed by the end user at the time of installation.

The bus termination resistor is activated setting switches 1 & 2 on the 2-pole DIP switch (located on the internal DeviceNET controller board) to the "ON" position.

DeviceNET Controller Board and DIP Switch Location

to gain access to the controller board, remove four Allen-Head Screws and remove rear cover

String Encoder

Mates To Virtually Any Encoder
Ranges: 0-25 to 0-50 inches
Available With or Without Encoder

PT8600

Specification Summary:

GENERAL

Full Stroke Range Options 0-25, 0-50 in. and 0-625, 0-1250 mm
 Motion Conversion Ratio:
 English Ranges 5 inches per turn, *see ordering information*
 Metric Ranges 125 mm per turn, *see ordering information*
 Accuracy $\pm 0.04\%$ full stroke, *contact factory for better accuracy*
 Measuring Cable Options *see ordering information*
 Module Material powder-painted aluminum
 Maximum Allowable Rotational Sensor Torque 1.0 in.-lbs.
 Weight 3 lbs. max.

ENVIRONMENTAL

Operating Temperature -40° to 200° F (-40° to 90° C)

Outline Drawing

DIMENSIONS ARE IN INCHES [MM]
 tolerances are ± 0.02 in. [$\pm 0,5$ mm] unless otherwise noted

* tolerance = $+0.005 -0.001$ [$+0.13 -0.03$]
 ** tolerance = $+0.005 -0.005$ [$+0.13 -0.13$]

Our unique linear-to-rotational, industrial-grade string encoder module mates to virtually any encoder giving you a cost-effective linear position measurement solution that precisely fits your requirements. The PT8600 takes just minutes to install, fits easily into tight areas and does not require perfectly parallel alignment. To order, simply select the stroke range, the cable tension and the mounting style that matches your encoder.

If you want us to provide the encoder or you don't see the mounting style you need, please give us a call.
